The impact of midwifery management of women at risk of preterm birth: A pilot study. Preterm birth is a major cause of morbidity and mortality in the newborn, with rates of preterm birth continuing to rise in developed countries. Midwives play a key role in assessing risk and managing care for women at risk of preterm birth. However, in the UK a paucity of midwives specialising in the care of women at risk of preterm birth and the management of such women by midwives working across a range of settings is widely recognised. The objectives of this pilot study were to investigate the feasibility of incorporating a midwife who specialises in the management of women at risk of preterm birth into community-based maternity services; to assess the effectiveness of such a model of care; and to identify the midwives' views on the feasibility of working in this model of care. Midwives were invited to participate in the study in two health boards in the West Midlands of the UK. Midwives were approached by phone and offered an individual face-to-face interview. Participants completed a pre- and post-interview questionnaire and were asked about their experiences of providing care for women
