In April 2012, Autodesk released on AutoCAD LT the ObjectARX-based object-oriented AutoLISP 2.0. In June 2015, Autodesk launched its native mobile App Studio 3D, based on an API using ObjectARX and a fully managed C++-based framework. Software development In AutoCAD LT, AutoLISP 2.0 was added. It includes the ability to share Visual LISP scripts between different AutoCAD LT drawing files and among different users. There are two versions of AutoCAD LT: AutoCAD LT 2011 and AutoCAD LT 2012. The 2012 release had an issue with sometimes the application's shortcut keys not working. AutoCAD Standard/AutoCAD LT is a different application with a different interface than AutoCAD LT. Features AutoCAD offers many facilities, such as linear and area geometry editing, structural analysis, feature extraction, line and path management, text management, design and documentation tools, including the ability to extract standard drawings from proprietary CAD data, intelligent management of multiple views, several object-editing modes (for example, rotate, mirror, pin, and slide) and a variety of technical features such as revit, animations, and non-destructive editing. It has a large application market and has been used in a wide variety of industries. A full set of 2D drafting tools can be used to trace 2D entities in 3D, and can be used to perform a number of tasks, including: Combine multiple entities into one entity (extracting sub-entities, by switching entities in a group) Display properties of entities in a given group (such as tag or description) Convert entities to fit into a given region, or to fit a given outline or boundary Associate objects from a given drawing with objects from another drawing Manage multiple views Apply a style to a drawing Preview the drawing in different viewports Write a freehand drawing (linear or angular) or with a digitizing tablet Draw freehand drawings Save work in an external format, such as Postscript, EPS, or a file format of the user's choice Export to DWG, DXF, PDF, or TIFF format Read model and survey data from geometric data exchange format (GED) Draw, trace, and measure entities using geometric algorithms A set of 3D drawing and modeling a1d647c40b

The team is already a regular participant in the series, taking three wins in the past two years, and has run competitively in the series using the previous-generation 1.6-litre Ford EcoBoost. This year, BRDC-backed Magna has upgraded to a 1.6-litre turbocharged Ford EcoBoost for the first time in a year. "The team's focus is purely to run in the new car," said team manager Andy Wells. "In the future we'd like to see a full-time programme on the grid. "When we came to this year the current car couldn't take us forward, so we felt it was time to upgrade. We have a lot of partners helping us in this year and we're really pleased with the package we have for the BTCC." Magna's car will be run by Graeme Cronje with Tom Onslow-Cole on board, making it the first time that the team has run the two-car setup. Meanwhile, the two-time TT winner has expanded his
