What's New in the Small Tools?

Why I created this little utilities? If you have not noticed it, Windows' drive information system is cluttered with so many unnecessary details that you hardly know where you end up every time you open your drive system. And some users are still using Windows 2000, that is outdated to 8. I wrote this small utilities to fix this problem and to provide a clean way to get drive information, an easy way to fix errors or to change a permanent system drive. They are all you need, if you want to add a permanent system drive, or if you want to fix a problem or change a permanent system drive. TempCleaner : As a name says, the goal of TempCleaner is to clean your temporary folder. In recent Windows versions, your temporary folder is full of useless files and services that are not needed. It is full of incomplete and corrupted files, like those that end with .tmp, or .iso, or .zim (I'm talking about the file format made by the self-service software included in some O.S. images). In addition, it is full of files with third-party software and services that are already installed in your computer. They are there, but they are not needed. Finally, it is full of system errors. When you browse your temporary folder you can easily see things like "error while opening, the service host could not be started". You might think that what I just said is too much, but it is not, since these unnecessary files take up memory and slow down your computer a lot. After your computer is clean, you have everything to change your system drive. It is just one step after TempCleaner. The TempCleaner is a very simple utility. To run it, double-click on the TempCleaner icon, that appears on your desktop. Do not click on the 'Run' or 'Open' buttons, as the TempCleaner will first open the temporary folder to clean it, and then close it. The TempCleaner will clean your temporary folder very fast, because it is only temporary, and it will always delete the files you want to delete. For more information, read below. Rexplorer: The goal of Rexplorer is to clean and fix the start menu. We all know that the start menu is one of the most interesting parts of Windows. Unfortunately, the start menu can get a cluttered look, because you start adding new services, new icons and new third-party software. In addition, you might have the start menu looking messy because you have been renaming a lot of services or files. Unfortunately, renaming a file can also cause the start menu to look a mess. To fix the start menu, you have to
